INTRODUCTION

Not-for-Profit Encino Hospital Medical Center (“EHMC” or the “Hospital”), a service of the Prime Healthcare Foundation, is a 150-bed state of the art hospital located in Encino, California. Its multi-disciplinary staff consists of 330 physicians and 520 professional support staff.

Encino Hospital Medical Center serves a diverse population and incorporates elements of urban and suburban medicine in a smaller caring environment. It offers a wide array of inpatient and outpatient services. The Hospital is consistently at the forefront in providing innovative and integrated healthcare. In 2007, the Hospital was purchased by Prime Healthcare Services. Prime Healthcare has continued to operate the Hospital after it was donated to Prime Healthcare Foundation, a 501 (c)(3) charitable organization. IBM Watson Health has recognized this forty-five-hospital system as a top 15 health system in in the nation.

Patients treated at Encino Hospital Medical Center receive the services of a large medical system in a smaller, more personal setting.

Encino Hospital Medical Center serves a diverse population and incorporates elements of urban, suburban, and rural medicine, offering a wide array of patient services. It offers 24/7 emergency services in addition to a wide range of highly specialized medical, surgical, and diagnostic services. Its state-of-the-art geriatric service includes a geriatric Senior Emergency Room, Comprehensive Senior Care Program, Geriatric Inpatient Wing, and Geropsychiatric Inpatient Services. Attracting many world-class physicians, the professional clinical teams use an interdisciplinary approach to ensure comprehensive care for each patient.

EHMC’s mission statement is quoted below.

MISSION AND VALUES

As a not-for-profit hospital, we strive to ensure that all residents have access to the most advanced healthcare treatments and services available, regardless of ability to pay. This is expressed in our mission statement, and the values that crystallize that statement.

Our Mission is to deliver compassionate, quality care to patients and better healthcare to communities.

Our Values include:

Quality

We are committed to always providing exceptional care and performance.

Compassion

We deliver patient-centered healthcare with compassion, dignity and respect for every patient and their family.

Community

We are honored to be trusted partners who serve, give back and grow with our communities.

Physician Led

We are a uniquely physician-founded and physician-led organization that allows doctors and clinicians to direct healthcare at every level.

LEADERSHIP

Encino Hospital Medical Center is overseen by a governing board composed of physicians and medical professionals, and community members who are users and/or service collaborators with the Hospital. They are listed below.

Governing Board & Leadership

Sunny Bhatia, M.D. - Chairman of the Board / Chief Medical Officer

EM V. Garcia - Vice Chair of the Board / Hospital Administrator / Chief Nursing Officer

J. Nathan Rubin, M.D. - Chief of Staff

Rick Mahalingam - Regional Chief Financial Officer

Kenn Phillips - Community Member

David Thorson - Community Member

Christopher Cooper - Community Member

Jason Greenspan, M.D. - Member-at-Large

SERVICES

Encino Hospital Medical Center serves a diverse population and incorporates elements of urban, suburban, and rural medicine, offering a wide array of patient services. These include:

- 24-Hour Emergency Care
- Acute Rehabilitation Unit (ARU)
- Clinical Laboratory Services
- Comprehensive Care for Joint Replacement
- Comprehensive Senior Care Program
- Critical Care Unit
- Gastrointestinal Services
- Imaging Services
- Pharmacy Services
- Primary Stroke Center
- Rehabilitation Services
- Respiratory Care
- Senior Behavioral Health Services
- Senior ER
- Subacute Nursing Care Center
- Surgical Services
- Transfusion-Free Medicine Surgery
- Other Services

EXECUTIVE SUMMARY – COMMUNITY BENEFITS

The 2021 Encino Hospital Medical Center (**EHMC**) Community Benefits Report (**CBR**) provides an annual update to the Hospital's 2019 Community Health Needs Assessment (**CHNA**); and determines relevance of current health status issues found in the community as of 2021. As the process of reviewing and analyzing community needs has progressed, it is clear that while changes have occurred in the San Fernando Valley as a whole, and in Encino Hospital Medical Center's immediate area, the changes have not been uniform throughout the valley.

This Community Benefit Report incorporates data from area-wide analyses provided by the Los Angeles County Department of Public Health (**LADPH**) Key Indicators of Health (**Key Indicators**) which includes data concentrating on the area immediately surrounding EHMC, as well as overall data for the county. Some data is not directly comparable between the two areas, but each discussion provides insight into needs found in the EHMC service area.

The primary focus of the Community Benefits Report is to address the issues defined as the most important for EHMC to address during the Implementation Plan Period (2020, 2021, and 2022).

The primary needs to be addressed from 2020 to 2022 are outlined in following sections, and both the planned interventions, and the actual results are discussed in summary form.

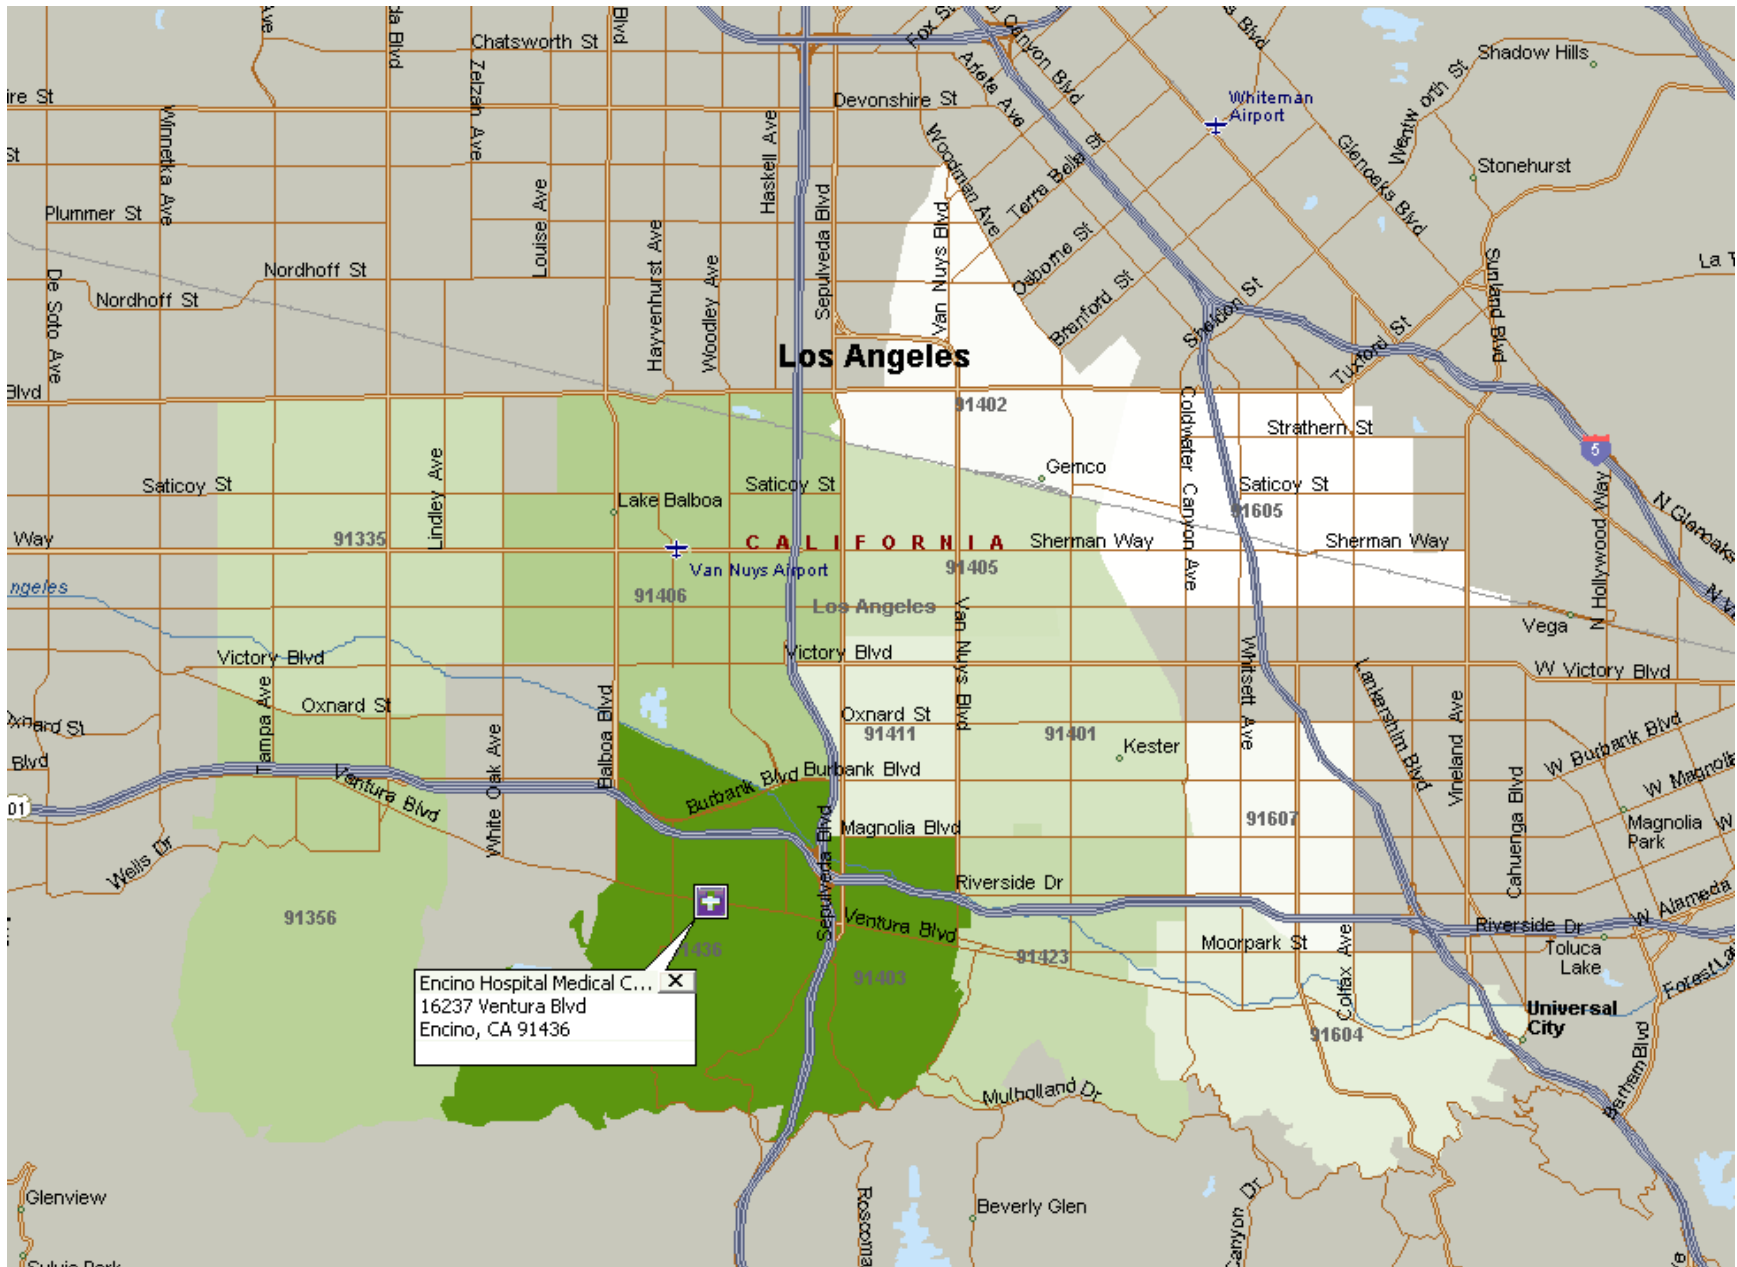

Encino Hospital Medical Center has used the 2019 CHNA results as a basis for its ongoing process of addressing the needs of its service area. The Primary Service Area that constitutes EHMC's core service area changed only minimally over the three-year period. That area is defined below, and the interventions to address the needs stated are outlined in the Encino Hospital Medical Center Service Area Needs and Interventions.

SERVICE AREA

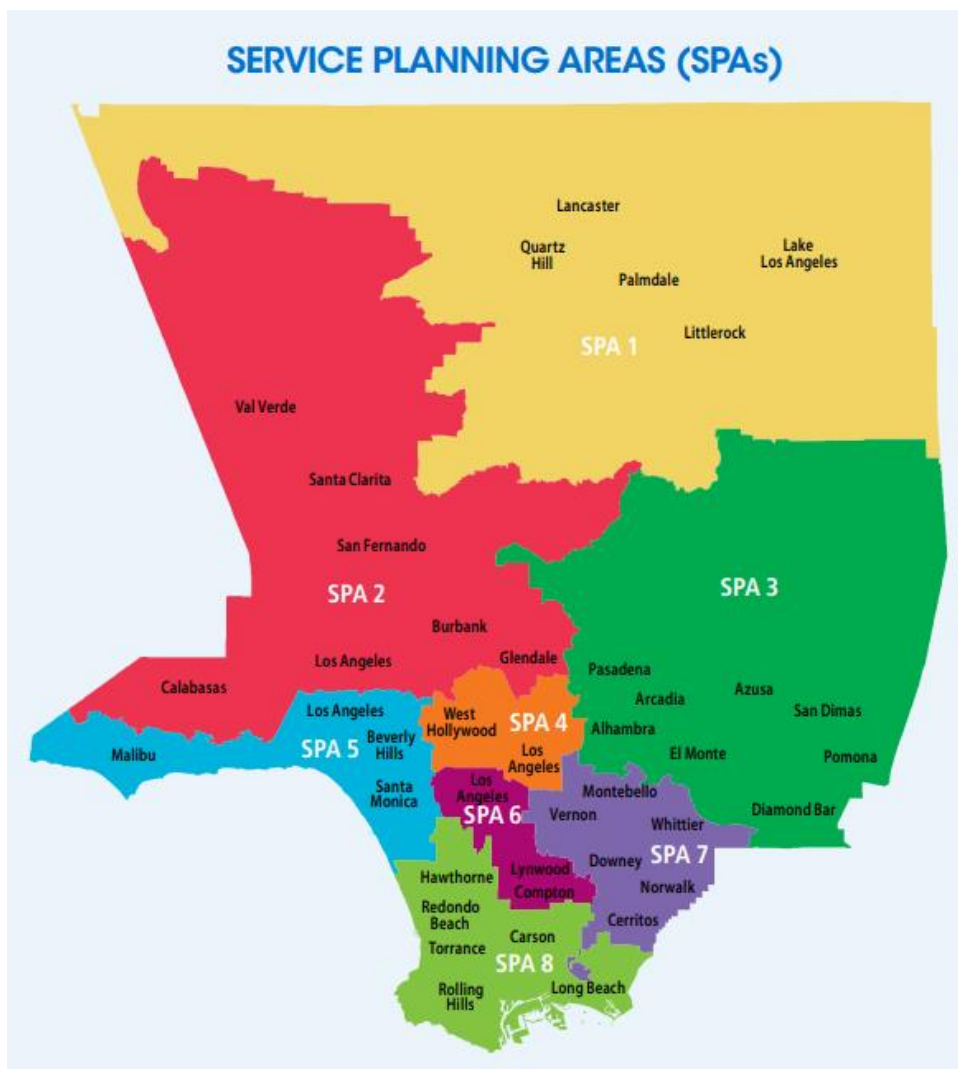

Although it has evolved slightly from the last CHNA report, EHMC's Primary Service Area (**PSA**) remains concentrated around the Hospital's site, extending mostly east and west from that location. As is typical for hospitals in highly populated areas with small zip codes, a few zips account for much of the utilization. After those few, utilization is widely scattered. For 2021 (the last full year of available data), the PSA zip codes listed below accounted for 47% of all discharges from the Hospital. No other single zip code accounts for more than one percent of all discharges.

The thirteen zip codes that comprise the Primary Service Area are highlighted in green on the following map. The density of color indicates the relative contribution to the total discharges. The PSA zip codes include the following:

- 91335 Tarzana
- 91356 Tarzana
- 91401 Van Nuys
- 91402 Panorama City
- 91403 Sherman Oaks
- 91405 Van Nuys
- 91406 Van Nuys
- 91411 Van Nuys
- 91423 Sherman Oaks
- 91436 Encino
- 91604 Studio City
- 91605 North Hollywood
- 91607 Valley Village

The Los Angeles County Department of Public Health (LADPH) is charged with collecting and analyzing health indicators for the county as a whole. To provide more localized information on various portions of the county, LADPH divides the county into eight Service Planning Areas (SPAs). EHMC is located in SPA 2 which encompasses the San Fernando Valley. It is shown in red on the following map of Los Angeles County.

EHMC is located near the “Los Angeles” label in the red zone.

Los Angeles County performed a County Health Survey in 2017 which is remarkably similar to the surveys conducted by KeyGroup and its cooperating agencies in 2019. The results of both surveys are incorporated in our discussion along with comments relating the two.

LADPH’s report, entitled *Key Indicators of Health by Service Planning Area 2017*, is the most recent county-wide study. It lists over 100 various indicators of health. It is interesting to note that SPA 2 is among the healthiest areas in the county, with nearly 30 measures on which the area is above average. By contrast, only five health indicators were below the county average, including:

- Sharing meals as a family daily,
- Using E Cigarettes,
- Suicide rate per 100,000 population,
- Incidence of Alzheimer’s Disease, and

- Incidence of Breast Cancer.

In the interest of brevity, only the data used to directly create the service needs to be addressed by EHMC are outlined in the following section. Detailed data can be found in the 2019 CHNA report which can be found on EHMC's website.

ENCINO HOSPITAL MEDICAL CENTER SERVICE AREA NEEDS AND INTERVENTIONS

The results of the CHNA process formed the basis for the Implementation Plan that was to guide EHMC's participation in community health care for the years 2020, 2021, and 2022. This Community Benefit Report summarizes EHMC's progress in meeting the community's needs as outlined in the previous Implementation Plan and incorporates needs and plans found in the 2020-2022 Implementation Plan completed May 2020. The issues listed below are the ones selected as the ones most appropriate for EHMC's intervention in 2019. The **EHMC's Results** section of each lists the accomplishments related to each need category. A following section lists the issues from the 2019 CHNA report, and notes that plans to address those issues are still in process.

It is important to note that the Covid-19 pandemic was the dominant health issue for most of 2021, as new vaccines were developed and became available in limited amounts at the start of the year, with growing availability and issues related to distribution as the year progressed. Rapidly changing directives regarding social distancing, masking, and public gatherings occupied much of the medical community, adding to the challenges of dealing with the demands on staff. These issues severely circumscribed efforts to reach into the community and resulted in some priorities being deferred or postponed until the Covid-19 virus could be brought under control, an effort which is ongoing in 2022. Another issue that became prominent in 2021 was growth in the unhoused population in the county. Both of these issues affected EHMC's community service efforts.

1. **Coordination of Care** – Existing payment programs and referral patterns among healthcare providers are highly site-specific, and patients leaving a hospital or other care provider are often also leaving the payment program that covered their care. Any follow-up care is often at the mercy of the entity to which the patient is referred, and often there is little or no coordination regarding care needs and/or regimens to assure maximum recovery. This can result in preventable relapses or complications. Over the previous three years, the federal government has attempted to address these issues in many ways, but a true coordination system has yet to be developed. Individual providers are attempting to work across healthcare provider “silos” to organize care coordination programs, but much work remains to be done. With the advent of Covid-19, many plans to deal with care coordination are being reworked “on the fly” as data on its spread and severity becomes available.

EHMC’s plan includes working with stepdown providers, including nursing and rehabilitation hospitals, as well as home health agencies and social service agencies. The Hospital is working with these groups to develop protocols to share information back and forth about clients transferred from one site to another, with provisions to assist other providers in maintaining health status of transferred clients on their recovery path. Additional research is in process to create methodologies for identifying high-utilization clients, and coordinating with medical groups’ social service providers to assist in supporting these clients in their homes so they do not become admissions to the Hospital.

EHMC’s Results – Protocols have been regularly evolving to cope with changes in treatment protocols and types of medical issues presenting at the Hospital, as well as in changing transition strategies related to outplacement of patients needing care best provided in non-hospital settings. Staff and management are in constant contact with step-down providers. The use of Zoom and other virtual meeting applications allow interactions to take place without adding to infection risk that could result from in-person meetings. Patient transitions to selected nursing and retirement housing communities are continuing to occur, as well as programs to allow easier transition to home environments. These are being reviewed regularly. EHMC continues to assess existing methodologies’ usefulness in assuring continued recovery from the acute incidents that brought patients to the Hospital in the first place. Weekly meetings, as well as ad hoc conferences as needed, are conducted within the Hospital to assess progress. Regular meetings are organized to review coordination of care with Skilled Nursing Facilities, Home Health Agencies, and Hospice providers. While face-to-face meetings are less common, phone and Zoom conferences with Assisted Living providers and other community agencies are continuing.

2. **Transitions of Care** – The actual provision of care is just as fragmented as the payment system that supports it. Patients discharged from hospitals or other care facilities often find themselves at loose ends once they leave the premises. Care coordinators and social service agencies attempt to manage transitions, but their ability to assure appropriate care in offsite situations is constrained by their inability to actively follow clients from the facility to another care site or to home. Also, there are no formal programs to determine that the care settings into which patients are released are the most appropriate, or even adequate. Existing payment programs generally provide no ability to fund follow-up care or patient management programs. Some early systems are being designed to work with the most frequently seen clients to minimize the amount of time they spend in inpatient settings, but funding for such systems is not commonly available, and care providers are developing these systems on their own. The advent of Covid-19 has created opportunities and demand for better tracking and coordination of care, while at the same time creating issues with patient transfers as providers attempt to limit their Covid-19 exposure. The interventions of state and federal government agencies and the accompanying reimbursement for care related to Covid-19 has created both opportunities and potential traps for providers, due to changes in what treatments merit coverage. These rules are being amended or revised rapidly, as Covid-19 viruses mutate, and payment programs attempt to follow changing protocols

EHMC's Plan includes provisions to improve communications between the Hospital and step-down providers both before and after transitions, to clarify client needs and necessary treatment protocols upon transfer. These provisions are now in review, to address Covid-19 issues and continue to provide the most appropriate care. As payment programs develop to facilitate such services, the Hospital will coordinate with providers to maintain an equitable reimbursement environment for all involved parties.

EHMC's Results – As noted in item 1 above, protocols currently in place are being reviewed and updated to guide transitions of patients to selected nursing and retirement housing communities, as well as programs to allow easier transition to home or quarantine environments. These are being reviewed as necessary to assess their usefulness in assuring continued recovery from the acute incidents that brought them to the Hospital in the first place, and to ensure that virus strains are not transferred along with the patients. Meetings that used to be monthly are now supplemented by rapid response conferences as treatment protocols, transfer

arrangements, and payment policies change. EHMC has also been in contact with the California Department of Public Health to devise treatment modalities when vaccines became available. The Hospital has sponsored Community Vaccine Clinics in conjunction with the MyTurn.gov program, and provided vaccinations to over 250 community members. Along with the Covid-19 services, EHMC also provided stroke and heart health information. The Hospital will continue to work with appropriate agencies to deliver vaccinations and boosters as demand indicates, and will maintain its public information efforts as appropriate.

3. **Payment Issues** – The Affordable Care Act has been successful in increasing the number of California residents who have health insurance in some form, with one-third of the state’s residents now covered by MediCal. Fewer than 7% of the state’s total residents are without insurance, down from over 12% three years ago. One side effect of the push to get people insured is that many of the insurance programs developed have been designed with substantial deductibles. So even though more people have insurance, they still face significant costs if they actually use that insurance. Thus, while the proportion of uninsured and self-pay patients decreased and the number of clients with insurance cards has grown, the amount of bad debt from unpaid deductibles and coinsurance has also increased. As insurance rates rise faster than inflation, employers who provide health insurance have increased their deductibles and copays as well. And while the ACA-conforming policies ostensibly cover a wide range of illnesses, including mental illness, the range of conditions not covered is still large. Finally, the election results and expected review of the ACA under the new administration will create now challenges and opportunities as the legislative and regulatory environment evolves.

EHMC’s Plan includes provisions to continue assuring that clients who can get insurance coverage are directed to the appropriate sources. In addition, EHMC will continue to review planned and newly passed legislation to ensure continuing affordability among clients.

EHMC’s Results – The insurance qualification process is now deeply rooted in the admission and Emergency Department triage process, to assure that patients who may qualify for various payment programs are enrolled in a timely manner. Changes in reimbursement due to Covid-19 are being tracked and analyzed to assure that patients presenting with virus symptoms are treated appropriately, and billing for those services is directed to the correct payment source. It was noted earlier, and is reiterated here, that payment systems related to Covid-

19 are changing intermittently. EHMC staff is tracking these changes, and adjusting payment and billing operations to meet the evolving needs.

4. **Mental Health** - According to the primary data collected via key informant interviews, focus groups and surveys, many of the health care providers identified mental health as a major issue in the Encino Hospital Medical Center service area. Discharge records for 2019 from EHMC show that the single most common MS-DRG family is Psychoses (the overall term for mental health issues), accounting for nearly 18% of all discharges for that year. Mental Health was the most commonly cited Health Need by focus group participants throughout SPA 2, and was also the fourth most-mentioned item, described as “Access to Mental Health Providers”. This condition is often a co-morbidity with other physical ailments. Mental issues existing beside actual physical disabilities complicate treatment for the physical manifestations. While mental health conditions are formally considered equivalent to physical ailments for payment purposes, diagnosis and treatment protocols for them are less well-defined. Most insurers tend to encourage outpatient care for all but the most dangerous mental conditions. Additional problems related to mental health include a high incidence of homelessness and substance abuse, which are not amenable to inpatient treatment and are typically not considered reimbursable services by payors. Since hospitals have no control over patients’ mental illness treatment courses after they are discharged, and compliance with treatment regimens is difficult, patients with mental issues in addition to their physical illness are some of the most often re-admitted clients at any hospital. The mental health issues associated with Covid-19 are only beginning to be revealed and analyzed, and treatment modalities are expected to reflect discoveries related to the virus.

EHMC’s Plan – As a primary care provider of mental health services, particularly in geriatric services, EHMC is dedicated to continuing its existing services. As more focus is directed to mental health issues associated with acute admissions to hospitals, EHMC is expanding its coordination practices with community providers to identify high-intensity users of the Hospital’s services with accompanying mental health issues that can be addressed in alternative settings. With better coordination, these clients can be directed to more appropriate care sites. EHMC will also research options to coordinate community care solutions with the Hospital’s inpatient services as crises arise in those community locations, and reflect innovations in care to address Covid-19 issues.

EHMC's Results – The specialized 13-bed inpatient unit is designed specifically to focus on senior behavioral health, addressing the unique emotional, behavioral, and mental health needs of adults ages 50 and older. EHMC's program is designed to improve day-to-day functioning, leading to improved health and a higher quality of life. Our team is comprised of experienced and compassionate healthcare professionals who are devoted to providing the care and emotional support these patients and families need. Because the program is Hospital-based, we can accept patients suffering from psychiatric issues and chronic medical conditions. At the close of 2021, increases in mental health encounters were beginning to occur, and the Hospital is adjusting its services to address the influx. More concrete updates to operations will be incorporated as Covid-19 related mental health issues are more clearly understood, and the lingering impacts of Covid-19 are felt by area residents.

5. **Diabetes** – Diabetes was the physical ailment most cited as an issue by the focus groups at EHMC, and the second-most common Health Need cited by the VCCC focus group respondents. It is a common underlying condition for many other acute admissions to EHMC and other hospitals because it presents so many complications that create crisis situations. While it is not one of the most common admission diagnoses, it is one of the most common complications accompanying the admitting diagnosis. It was among the top ten causes of death cited in the Los Angeles Department of Public Health's *Strategic Plan*. Adult-onset diabetes is largely a lifestyle disease, commonly associated with obesity and lack of exercise. As with mental illness, treatment for diabetes is typically a long-term process and best conducted on an outpatient basis. But as is the case with mental illness, hospitals have little ability to control compliance with treatment regimens beyond the hospital walls. Many diabetics find themselves in and out of hospitals as they fail to manage their condition. Diabetes was the second-most cited issue among respondents in EHMC's Focus Groups.

EHMC's Plan is primarily focused on education, since care for acute diabetes issues is expensive and often delivered long after the most effective treatments are available. EHMC will continue to participate in health fairs, and coordinate with schools and community groups to educate area residents on the risks that lead to diabetes.

EHMC's Results - Examples of health fairs supported with diabetes education materials prior to the Covid-19 lockdown include the Encino Family Festival, Sherman Oaks Street Fair, and several farmers' markets. These in-

person interventions have been suspended until they are deemed safe to resume. Diabetes management classes are still offered at the Hospital, but only to inpatients until it is safe to invite visitors back to the Hospital. Website information programs are available online for those seeking information on symptom management, and referrals are offered to appropriate providers.

6. **Heart Disease** - cardiovascular disease includes congestive heart failure, heart attack, coronary heart disease/coronary artery disease and stroke. Coronary issues are among the most frequently reported reasons for EHMC hospital admissions, and these conditions are similar among other SPA 2 hospitals. Coronary Heart Disease and Stroke are the Number 1 and Number 2 causes of death in the *Strategic Plan*, and together they represent over half of all deaths due to the top ten causes of death in the county. It is important to note that although Covid-19 became the third most-common cause of death nationwide in 2020 and 2021, with 900,000+ deaths attributed, this number is less than 60% of deaths due to cardiac conditions, which exceeded 1,600,000. **EHMC's Plan** includes education regarding stroke and cardiac risks, along with maintaining state-of-the-art services for cardiac emergencies seen at the Hospital. The Hospital's Acute Rehabilitation Unit is a center for rehabilitation and recovery from cardiac events. Epic Cardiology Medical Group is coordinating with both EHMC and Sherman Oaks Hospital to provide state of the art care for patients, and expand the range of services available at the Hospital.

EHMC's Results – The education programs provided by the Hospital are ongoing, and growth in expertise among staff in the Acute Rehabilitation Unit is allowing the Hospital to expand its range of services to those recovering from cardiac events. Epic Cardiology's clinical expertise is being utilized to monitor and fine-tune the services provided at the Hospital. While participating in Covid-19 vaccination events, EHMC staff also provided Stroke and heart health information to those getting their shots.

7. **Lack of Knowledge about Health Services** - Knowledge of healthcare needs are both commonly held and highly specialized. Nearly everyone knows that he/she should exercise, eat in moderation, and not engage in risky activities. Beyond those basics, knowledge of specific behaviors and regimens to maintain good health is less common, and for people with specific health issues, the appropriate actions may not be intuitive. Added to this

limited knowledge base is the fact that accessing experts (i.e., physicians, dieticians, etc.) can be costly for those not highly insured. Data is available on websites and various disease-related organizations work to inform the public about their specific illnesses, but many area residents may not know where to find needed information, or may not feel they can afford to see the appropriate professional. During the primary data collection process, health care professionals and service providers shared that there is a lack of knowledge regarding the existing health care services among their constituents. This lack of knowledge regarding low-cost health care services makes it difficult for their clients to access the care they need.

EHMC’s Plan focuses on educational programs that target area residents who are not current clients of the Hospital, delivered at health fairs, schools, retirement communities and other locations where people are interested in learning about health options. Additionally, the Hospital staff maintains a database of insurance opportunities that can be used to cover uninsured clients, and collaborates with eligible clients to get them into appropriate programs. This is an ongoing process as insurance options change often, and many more changes are possible over the next few years. As was noted earlier, changes to services and payment systems are being made as Covid-19 responses change available options. The Hospital will continue to monitor and address changes as they occur.

EHMC’s Results – Although a few educational programs occurred before the pandemic shutdown, most outreach programs involving outside participants were shut down from March until the end of the year. Many are only starting to reopen. So the primary “educational” programs have focused on ways to best use and conserve Personal Protective Equipment (PPE) and changing protocols for use of Hospital equipment and efficacy of treatment modalities. At the start of 2021, as vaccines became available, the focus shifted to educating residents on the need for vaccination and other control methodologies to limit the spread and deadliness of Covid-19. As new strains were discovered and information sources that either were confusing or plainly misinformed were transmitted through new channels, trustworthy advice and opportunities for vaccination were publicized and offered to area residents.

Two new issues were developed in the 2019 CHNA process which differ from the ones listed in the 2016 CHNA. Additional issues related to homelessness and coordinated care of Social Determinants of Health (SDOH) arose in

2021, and efforts to deal with these are discussed below. They will continue to be addressed going forward, although the planning process is ongoing, and subject to change as conditions related to Covid-19 impact these matters. As noted in earlier sections, the influence of the Covid-19 pandemic suffuses all aspects of the Hospital's operation.

8. **Homeless Issues** – The problem of homeless populations in EHMC's service area is larger than the Hospital can resolve on its own. But as a point of initial contact with many homeless people, EHMC can and does serve as a referral and coordination resource to assist homeless service agencies in providing solutions to those who need them. Discharges of patients with "homeless" listed as their zip code represented over 6% of total discharges at EHMC in 2019. Recent propositions addressing homeless issues have passed, providing new funding for homeless programs, and opportunities to assist in the development of new options and services may present new options for EHMC participation.

EHMC's Plan will focus on City and County innovations to assist currently homeless residents of the PSA in finding housing and supportive services to facilitate their re-entry into mainstream housing, employment, and mental health status. These programs are still in development, and the ultimate availability of housing options beyond the known Covid-19 interim solutions as of this report date will influence EHMC's ability to participate in referral and treatment programs. Until more concrete programs are defined, and participation regulations clarified, EHMC will continue to monitor plans and refer homeless patients treated at the Hospital to existing service providers as appropriate. EHMC will continue to coordinate with various local, county and state agencies to find appropriate placements for unhoused patients arriving at the Hospital, and work with local fire and police agencies to help them manage their encounters with homeless persons

9. **Chronic Care Management** – Many of the ills that are common in the area's population, such as diabetes, obesity, high blood pressure, and cardiac disease are lifestyle- and chronic-disease related, so although they typically present at the Hospital in acute status, they are controllable in outpatient settings once the patient is stabilized. Many healthcare organizations are starting to address these Social Determinants of Health (**SDOH**), realizing that managing the conditions that create these health problems can often be done in home-based settings. The

Hospital has a vested interest in assisting other providers to manage their clients, to minimize the number of re-admissions and complications that compromise patient health.

EHMC's Plan includes improved communication with community services organizations dealing with the SDOH issues identified as medical precursors. In addition, as services become available to assist former patients to transition back to their home, and assess those environments for potential hazards and lifestyle issues, the Hospital will work with these organizations and the payors that cover patients' hospitalization costs to coordinate services that will minimize the potential for rehospitalization, and contribute to higher levels of resident health.

Encino Hospital Medical Center's commitment to the improvement of health in its community is ongoing, and EHMC will continue to expand its services and involvement in community health improvement programs.

COMMUNITY BENEFIT EXPENSES

Encino Hospital Medical Center provides services to patients without regard to ability to pay for those services, in addition to funding training and public education programs both on site and in the community. Schedule H of the Hospital's IRS form 990 for 2020 (the most recent year available) is presented below, showing expenditures of over \$9.8 million. This figure represents just over 19% if total Hospital expenses.

ACKNOWLEDGMENTS

This 2021 CBR is the result of the commitment and efforts of many individuals who contributed time, expertise, and resources to create a comprehensive and effective community assessment. Special thanks go to the EHMC Steering Committee and the Advisory Committee members, the staff at Encino Hospital Medical Center, Community leaders and organizations that participated in our interviews and members of the community that took the survey and shared their experiences and information for the benefit of this assessment.

Many data sources were utilized in developing the health profile for the Encino Hospital Medical Center Primary Service Area and larger comparison areas. Data from the U.S. Census Bureau underlies much of the information presented, but several agencies and providers have done important analysis on the Census data, and results of their work are included throughout this document. Important sources include:

- The Los Angeles County Department of Public Health's *Strategic Plan 2018-2023*
- The Los Angeles County Department of Public Health's *Key Indicators of Health by Service Planning Area 2017*
- Perception Health inpatient data was extracted and provided by Encino Hospital Medical Center
- American Community Survey section of the U.S. Census website
